

P24 patient

next generation remote patient monitoring

Carers, patients and their loved ones, are **poorly informed** about their health and only receive updates when it's **too late**...

Current solutions require patients or carers to **charge** the **device** and **don't monitor** at night.

Current commercial wristbands are **expensive** and don't track blood oxygen.

P24

20%

hospital beds occupied by dementia patients are due to **easily preventable** infections such as UTIs.

Turn over for our solution ...

NHS Long Term Plan (2019): Technology helps clinicians monitor the health of dementia patients in their homes.

1.1 million¹

Estimated people living with dementia in the UK by 2025.

£26 billion²

Current cost to the UK economy of dementia, this number will triple by 2040.

50%²

Unpaid dementia carers with limited expertise.

P24 uses **cutting edge technology** to help the UK's '2020 Challenge' in battling dementia.

1 NHS Long Term Plan. (2019). Technology helps clinicians monitor the health of dementia patients in their homes.

2 NHS UK (2019). NHS England - Dementia.

Remote patient monitoring

- allows patients to live at home
- frees up hospital beds
- enables early detection of health issues
- reduces the burden on carers
- provides peace of mind

Our **machine learning** powered **smartphone apps** allow patients to **track** their health and **alert GPs** and loved ones when **anomalies are detected**.

Sensors

next generation remote patient monitoring

P24 is powered by **body heat**, eliminating the need for charging... first of its kind!

P24 is a **simple-to-use** and **reliable** wristband that continually tracks vital signs **without need for intervention**.

P24 is tracking with high accuracy:

Heart rate

Body temperature

Blood oxygen

Step count
