Team Meeting

Meeting called by:	Simon	**Type of meeting:**	Client Meeting

Attendees: Dr. Viral Thakerar (Client), Zed Al-Aqqad, Ethan Benarroch, Jonas Frieling, Simon Hanassab, Peter Udvardi, Daniel Varga

Notekeeper: Jonas

Minutes

Agenda item: TIHM in primary care context

Discussion:

A pilot of the TIHM for dementia programme will be released and deployed to the Hillingdon 'neighbourhood' as part of 6 GP practices. The current framework of TIHM will remain, however GPs should also have access to data available to the Client Monitoring Team (CMT), remotely based in Surrey University.

Conclusions:

TIHM project is keen to deploy better sensors and continual monitoring for increased data count. Our device would fit well, as long as reliability is not significantly compromised.

Action items	Person responsible	Deadline
✓ Availability for 15th May Brunel Conference	ALL	N/A

Agenda item: Wearable Characteristics

Discussion:

Consider frequency of measurements of vital signs. Allow for integration with GP systems. Continuity of data. Regulatory compliance.

Conclusions:

Frequency of measurements does not need to be greater than once every couple hours. This means our power budget can be minimal. Discussions with Uni of Surrey regarding API integration necessary. Continuous data would be very valuable for their purposes.
