Team Meeting

Meeting called by: Simon	**Type of meeting:** Contextual planning for client meetiing

Attendees: Zed Al-Aqqad, Ethan Benarroch, Jonas Frieling, Simon Hanassab, Peter Udvardi, Daniel Varga

Notekeeper: Jonas

Minutes

Agenda item: Technology Integrated Health Management

Discussion:

Delve deeper into the concept of TIHM by the NHS and what they are trying to achieve. Currently using both passive (by a company called Howz) and active IoT sensors to form as features for the ML algorithms designed by University of Surrey.

Conclusions:

Current sensors being used seem primitive for purpose. There should be a strong demand for a wearable that can continually monitor vital signs. Let's try make a "TIHM in a box" concept which is self-contained for dementia users and their carers.

Action items	Person responsible	Deadline
✓ Research Howz and their involvement	Simon	12/5/2019
✓ Find out data protection issues regarding TIHM	Jonas	12/5/2019
